Hi Tasya. I see on the LDWG.org website that the Phase II validated data was posted Jan 4. Elly says LDWG is still on track to submit the draft DER to EPA late Feb 2022, final July 2022.

The Phase 2 data package is due at the end of the 2021 calendar year (so, let's say the beginning of the new year). The draft DER will bundle all data and evaluate it as a whole to define remedial areas and is due in late February 2022 (that date is based on an anticipated lab data receipt timeline, so it's not set in stone but should be close). Final DER is assumed in July 2022.

Hi Elly. Thanks again for sending me the QAPP. It says, " the Phase II DER will contain an interpretation of the data in order to define RAL exceedance area boundaries, general vertical extent depth, the range of technologies, and remaining data needs for Phase III (if any)." So that means it will wrap in results from both Phase I and Phase II, as opposed to just Phase II, correct? Also, wondering about schedule for the DER – when are you expecting it to be final? I'm asking because DOF is planning to use the sediment results in their Pre-CMS Conditions Report for Rhone-Poulenc which they will probably begin drafting late this year.

Thanks,  
Janette

Hello, all –

Thank you for your part in reading, reviewing, and finalizing the Phase 2 QAPP. It is ready for you to

download it for reference. Like other final documents, it will be posted to LDWG's website in the not too distant future.

The field work began yesterday in blistering heat, and will continue through July and, likely, into August.

Downloading instructions:

The final documents have been posted to Anchor QEA's LDW Sharepoint site under the "EPA Finals" folder and a link is included below for your use to download the files. There is also **a zipped file (otherwise you will be downloading individual elements of the QAPP, and there are a great many)** in the PDI QAPP Addendum folder to make the PDI QAPP Addendum and attachments easier to download.
